

Dear Trenchwood Institute:

Thank you for your application to conduct a live demonstration of advanced temporal-spatial manipulation technology (PTT Quantum Level 6, non-radiative per FCC Part 15) in San Mateo, California on Saturday, March 31, 2012. **We are pleased to inform you that UMMM has conditionally approved your project demonstration.** However, the committee issuing your transdisciplinary permit does have a few further questions.

As you know, the UMMM regulatory body was assembled by executive order to review any novel temporal-spatial manipulation technologies, to prevent accidental interference with the fabric of reality and forestall possible frivolous patent litigation. The **six committee members** were selected from a wide variety of federal agencies for having the most free time and fewest responsibilities, and have thus been able to devote all their resources to this important task.

Given our limited understanding of Trenchwood's research, we feel it is necessary to conduct a **live video conference** with your principals in order to ascertain the possible consequences of your technology. We may also require **additional access to the demonstration itself**, to ensure that all federal environmental, health, and safety regulations are adhered to.

In order to facilitate your preparation for our interview and possible intervention, we have attached dossiers to familiarize you with the specific expertise of each of our six committee members. Please be prepared to answer questions pertaining to their individual fields of study. **We look forward to hearing from you very soon to schedule our video conference.**

Sincerely,

Robert "Hank" Erickson
General Manager
Unknown Machine Management Monitors (UMMM)

Anastasia “Ana” Roeszler, PhD - Science Intern (Level 3)

After receiving a BS in Physics at Stanford, a Master’s degree in Theoretical Physics at Yale, and a PhD in Crazy WTF Physics at MIT, Dr. Roeszler did her post-doctorate research at Sterling Labs under the direction of Wayne Szalinski. As the only UMMM team member with an actual science background, Dr. Roeszler will be responsible for determining whether the Trenchwood Institute’s project will destroy the world as we know it.

Curtis C. Chen - Information Technologist

After assisting in the creation of the computer virus which inexplicably foiled an alien invasion in 1996 (remember that? That was *awesome*), Mr. Chen was asked to join UMMM to evaluate new computer technologies which might affect national security or video game performance. He will almost certainly require samples of any new electronic hardware for testing, and access to a copious supply of caffeinated beverages during the evaluation process.

Kathleen Virginia Wylie, Esq. - Legal Counsel

Ms. Wylie is a top-level prosecutor from the Department of Justice, whose extensive experience in future crime litigation make her ideal for the UMMM team. Her role in this investigation will be to pre-cognitively identify potential legal hazards to which the federal government may be exposed by association with the Trenchwood Institute, and to draft a minority opinion report addressing possible mitigation strategies.

Matthew "Matt" Cleinman, CPA - Financial Analyst

Mr. Cleinman comes to UMMM from a top-secret military facility deep in the Nevada desert. After nine years of approving purchase orders with an eagle eye for detail and accuracy, Mr. Cleinman is now UMMM's chief budget and finance expert. He intends to analyze the fiscal feasibility of the government's participation in the Trenchwood Institute project down to the last penny (or fraction thereof), leaving no space for error.

Robert "Hank" Erickson - General Manager

Armed with a BA in "Bizness Studies" from Florida State University (Tulsa Annex), Mr. Erickson has served at various federal agencies for over 26 years, ever since his pointy-haired father assigned him to handle the SDI Feasibility & Cost Planning organization, where Mr. Erickson's extensive background as a college DJ proved invaluable. Most recently, he supervised safety inspections of the John Hammond Dinosaur Escapade Resort Park and Casino. He is delighted to join the UMMM team as their generic manager.

Vittorio “Vic” Esplorare - Specialist

He comes to the UMMM team at special request from distinguished Senator Dominic Spia (R-NJ), for his strong analytical skill, and is in positively no way spying for any kind of foreign city or state. What a silly idea. Signore Esplorare's always strive for great perfection and organization will be key to ultimate success of this new team. God bless America! F*ck yeah!
